Spanish FCC and Dutch Heijmans team up for reconstruction A9 Badhoevedorp – Holendrecht

In September 2019, the Spanish construction company FCC was granted the responsibility for the design, construction and maintenance during the first two years of operation of the widening of the A9. As part of this project, FCC has now decided to subcontract both the asphaltting work and the construction of the acoustic barriers to Heijmans for a value of about € 80 - 90 mln.

For the timeframe and for the benefit of the project, FCC and Heijmans have signed a cooperation agreement. FCC's international experience together with Heijmans contacts and local knowledge will thus both be beneficial to the development of the project.

FCC welcomes Heijmans in the project. FCC, in its 120-year history, has strategically chosen to establish collaborative relationships with the local communities and companies in the areas where we operate. FCC is convinced that local knowledge strengthens our projects.

Heijmans is excited about the cooperation. Heijmans is happy to join forces with FCC and to create value for Rijkswaterstaat, the road users and the surrounding municipalities of the A9 project. Heijmans will share knowledge and experiences in close cooperation with FCC and we look forward to execute the asphalt and noise screen work packages and other future work packages.

About the project

and Holendrecht south of Amsterdam from three to four lanes in each direction and the construction of a tidal lane, a section of 1.6 km will be lowered in a so called 'sunken highway' with roofs on 3 places. In addition, noise pollution barriers are planned along a section of all together 14 km. The project aims to improve the flow of traffic, reduce traffic jams and improve the quality of life in the urban area by improving the connection between the periphery to the metropolis of Amsterdam while also offering more protection against noise pollution.

The project A9 Badhoevedorp-Holendrecht marks the fifth and final project for expanding the Schiphol-Amsterdam-Almere corridor and is part of the Schiphol-Amsterdam-Almere (SAA) project of Rijkswaterstaat.

FCC Construcción

FCC Construcción is among the fifteen largest construction companies in Europe and among the top forty in the world. The FCC Group construction area executes all kinds of civil works, both residential and non-residential construction.
